## ABOUT ME

Dedicated and skilled React Native and React.js Developer with 3 years of hands-on experience in designing and implementing efficient user interfaces. Proficient in building dynamic and responsive applications for mobile platforms and web. Adept at collaborating with cross-functional teams to deliver high-quality software solutions.

## EXPERIENCE

### Software Engineer

#### Stackroof Technologies

📅 Feb 2024 – Current

#### Padel Mates (React Native) [↗](#)

- Integrated Branch.io for deep linking and referral management, enabling seamless content sharing, personalized user journeys, and accurate tracking of user acquisition campaigns.
- Developed dynamic mapping features to help users discover nearby sports centers and facilities, utilizing React Native Maps and integrating geolocation services for real-time updates.
- Optimized the app for performance and scalability, ensuring it can handle high traffic and concurrent users without compromising on speed or functionality, using techniques like code splitting and lazy loading.

#### NiteOwl Bar and Nightclub Finder (React Native) [↗](#)

- Implemented Redux Thunk middleware to manage complex asynchronous logic, optimizing API calls for real-time updates on crowd levels, wait times, and cover charges, ensuring a smooth user experience.
- Enhanced user engagement features by integrating functionalities like favoriting venues, check-ins, and networking capabilities using React Native components and state management.
- Ensured cross-platform compatibility by leveraging platform-specific code and ensuring consistent behavior and appearance on both iOS and Android devices through thorough testing with tools like Jest and Detox.

### Software Engineer

#### Abstract LLP

📅 April 2023 – Jan 2024

#### Cookr: Celebrate Home Food (React Native) [↗](#)

- Worked in high-traffic mobile application with over 1 million downloads on the Google Play Store and delivered a seamless cross-platform experience for users on both Android and iOS devices.
- Integrated Redux Saga middleware to manage asynchronous operations efficiently. Orchestrated API integration within sagas for data retrieval and updates.
- Redesigned the Kitchen Page, Kitchen Card, and Cart Page, focusing on layout modifications and style enhancements as per design requirements. Refined elements for improved presentation and readability.

## SKILLS

Programming Languages : JavaScript

Technologies : React Native React js

Git Redux TypeScript Hooks

HTML CSS GitHub Firebase

REST APIs Tailwind CSS Saga/Thunk

Postman BitBucket Material UI

FlexBox Android IOS

## EDUCATION

Govt. Digvijay College, Rajnandgaon

M.Sc. in Computer Science

📅 Aug 2019 – Oct 2021

7.6 CGPA

Govt. Digvijay College, Rajnandgaon

Bachelor of Computer Application (BCA)

📅 Aug 2015 – May 2019

6.3 CGPA

Sarveswar Das High School

Class XII<sup>th</sup>

📅 June 2014 – May 2015

6.1 CGPA

## Cookr: Home Chef (React Native)

- Developed and integrated a robust broadcast messaging system within the Cookr app, facilitating seamless communication and updates for users.
- Implemented functionalities that enabled users to easily connect with support services via calls or emails directly from the application interface, ensuring prompt assistance and streamlined user interactions.
- Collaborated in Google Analytics and Netcore functionalities, enabling comprehensive monitoring of user interactions, behavior, and app performance.

## Jr. Software Engineer

### Extended Web AppTech

 Sep 2022 – March 2023

## TrustEasy (React Native)

- ATO EFT Reconciliation Report (implemented FlatList and API call, created reconcile reports; all clients' reconcile transaction reports are displayed on each client's transaction row).
- Fee Fund Refund Process Screen (implemented Axios for API calls; created tax return lodge, under review, and completed transaction).
- Transaction List Screen (implemented validation using Formik in transaction list and different screen for valid post API call).
- Search Clients (implemented API GET method call for searching clients in TextInput onSubmit).
- Workers Details Screen (worked in Client Screen; it has workers details component, each of the workers has Actions button modal, edit, and delete functionality).

## BuildTrust (React.js)

- Transaction List (created client transaction details Table component using react-data-table-component).
- Reconciliation Page (created Reconciliation page in list form and table form; user can interact with data in both List and Table form; it has dropdown list of banks and workers details and amount and tax, tax can be generated automatically according to amount).
- User Receipt (handled download and upload invoice and receipt in review page and reconciliation page; user can upload invoice in transaction list else download invoice won't be visible).

## Fipola App (React Native)

- Deep Linking (integrated deep linking, enhances the user experience by directly taking users to relevant content; users can share link and it navigates the user to the app directly from outside sources like other apps).
- Push Notifications (implemented Firebase push notification API into the app, and configured its dependencies; passes the FCM token).

## Food Delivery App

- Food Products Screen (implemented GET API call, displayed API response using FlatList; onPress each item route to single food page where food price, quantity, add food in cart button added).
  - Order Summary Screen (created add address component for order summary to add new address for user; after adding address, it will display all addresses in order summary screen; we can choose any address and continue to checkout screen).
  - Unit testing different components using Jest, achieving 80 percent code coverage and ensuring consistent application functionality.
-
